

Incoming Third Graders Math Summer Homework

In third grade, students are expected to not only be fluent in reading, but in mathematics facts as well. The more fact practice that children get, the more fluent they become!

Come up with a unique way to practice your multiplication facts (zeros-12s) over the summer to better prepare you for 3rd grade!

You can do this by making flashcards, a homemade board game, or any other creative ideas! This should be student-created. Start with the lower numbers and work your way up throughout the summer!

Good luck and have fun!
